ACTION REQUIRED: Credit Card Plug-Ins

In The Edge v. 5.2, Merchant Services is now implemented in a plug-in module. If you are currently using integrated credit card processing with PowerPay, you will need to configure your merchant services plug-in. There is a required configuration change on each workstation where you process Credit Cards.

In addition to the following configuration change, you must install a new Edge license file.

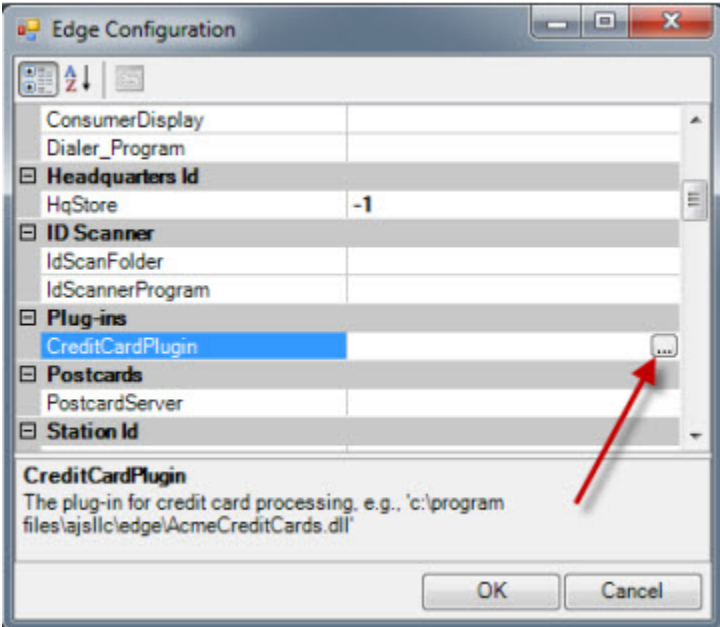

Install The Edge License

Open The Edge and select **Help ► Check for Updates**. If an updated license is available, follow the instructions to download and install it.

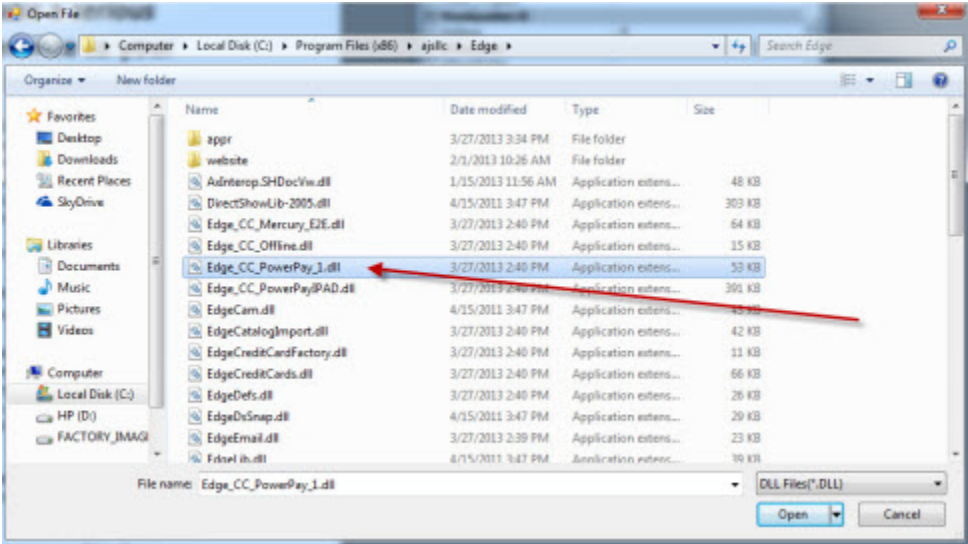

Configure Credit Card Plugin

Follow these steps on each station where credit cards are processed after 5.2 has been installed:

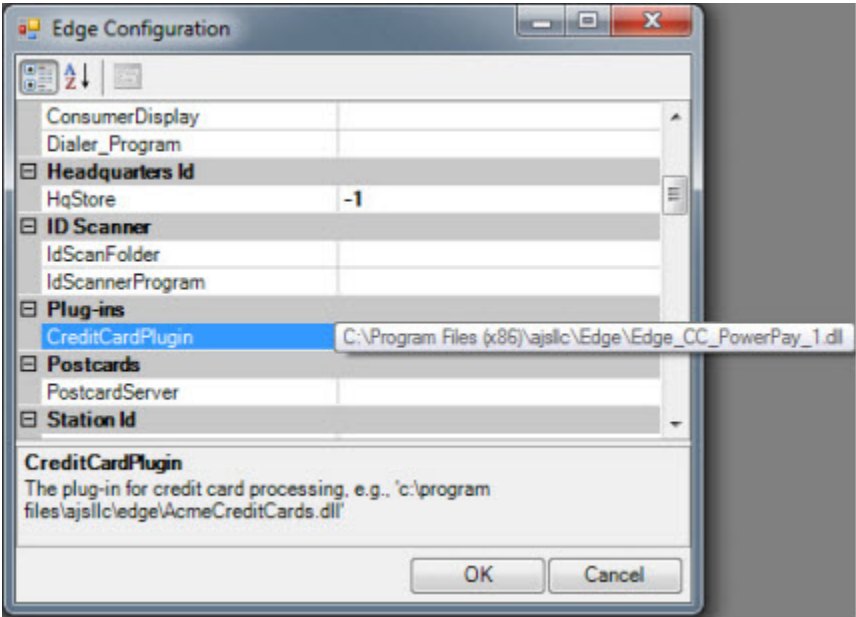

1. Open The Edge and select **Administrative ► Configuration**. Scroll down to find **Plug-ins**.

2. Select **CreditCardPlugins**.
3. Browse to the folder where The Edge program is installed. This is typically C:\Program Files\AJSLLC\EDGE\ or C:\Program Files (x86)\AJSLLC\EDGE\.
4. Select the plugin Edge_CC_PowerPay_1.dll.

- 5. Select **Open** to make your selection and return to The Edg Configuration screen.
- 6. Hovering over the **CreditCardPlugin** field in **Configuration** screen should produce the full path and file name so you can verify accuracy.

- 7. Repeat these steps on each workstation where The Edge and PowerPay were integrated for credit card processing in The Edge 5.1.
