## Positioning the Photo Box

- Lighting is key to professional-looking pictures. Ensure the photo box is positioned so enough light gets to it but without creating shadows. If not, ensure there is enough light to get a good picture.
- Position the photo box so that the camera hole opening is facing up.
- Position the photo box so that the opening is towards you. This will allow you to adjust the platform and object.
- Make sure the camera can reach the photo box.

## Setting Up the Photo Box

1. The photo box comes with two platforms and there are five different positions for the platforms.
2. Select a platform and position it to your preference.
3. Select a holder if you are using one. Place your object into the holder and position it to your preference.

Large ring holder

Medium ring  
holder

Small ring holder

Earring holder

Bracelet and  
Necklace holder

4. Provide a light source so the picture is well lit.
5. Once you are satisfied with the position of the object and the lighting, go ahead and take your picture using The Edge's Photo function or Acquire function.
